

OUSSAMA CHAABOUNI

Senior Software Engineer | C#/.NET | Cloud & Microservices | Azure Certified

Barcelona, Spain | +34 605 136 382 | oussama.chaabouni@hotmail.com | linkedin.com/in/oussamachaabouni | github.com/oussamachaabouni

PROFESSIONAL SUMMARY

Senior Software Engineer with 4+ years of experience designing and delivering enterprise-grade, cloud-native applications in C#, .NET, ASP.NET Core, and Microsoft Azure. Proven record of cutting release cycles by 40%, leading a full monolith-to-microservices migration, and building high-availability RESTful API platforms serving enterprise clients across 180+ countries. Microsoft Certified Azure Developer (AZ-204). Experienced Scrum Master and technical mentor in multicultural Agile/Scrum teams. With full fluency in English and French. Open to Senior Software Engineer and Lead Engineer opportunities worldwide.

TECHNICAL SKILLS

Backend: C#/.NET Core 8, ASP.NET Core, Node.js, Python (Flask), Java (Spring Boot), REST API Design, Microservices

Frontend: React, TypeScript, JavaScript (ES6+), Angular, HTML5, CSS3

Finance Domain: Transaction Processing, Regulatory Compliance, Audit-Grade Systems, Multi-Region Data Integrity, Financial Automation

Cloud & DevOps: Microsoft Azure, Azure Service Bus, Azure Functions, Docker, Kubernetes, CI/CD (Azure DevOps, GitHub Actions), Blue-Green Deployments, Feature Flags

Databases: SQL Server, MongoDB, Cosmos DB, Elasticsearch, Redis

Practices: DDD, SOLID, TDD, System Design, Code Review, Agile/Scrum, Technical Mentorship

AI Tooling: Claude Code, MCP Servers, Azure AI Services, Agentic Automation Workflows

WORK EXPERIENCE

Senior Software Engineer — Cloud Architect | EcoVadis

Jul 2023 – Present

SaaS Financial & Compliance Intelligence Platform | 180+ countries | Regulated, audit-grade environment

- Owned the backend of a cloud-native financial platform processing 50,000+ daily enterprise transactions with a 99.9% uptime SLA — covering compliance automation, audit workflows, and regulation-aligned data processing across 180+ countries.
- Drove end-to-end AI integration using Azure AI Services and agentic automation, reducing Mean Time to Recovery by 35% and accelerating delivery of regulation-compliant financial features across multiple verticals.
- Built and maintained scalable REST APIs consumed by multiple frontend clients and third-party integrations, applying strong API design, versioning, and authentication standards (OAuth2, Azure AD).
- Implemented full observability across all services using the ELK Stack, enabling proactive monitoring of financial transaction flows — catching anomalies before they became incidents.
- Mentored and reviewed code for a cross-functional squad of 8–12 engineers; shaped architectural decisions collaboratively and drove engineering culture around ownership and quality.

Software Engineer — Backend Lead & Scrum Master | EcoVadis

Nov 2021 – Jun 2023

Led platform modernization: monolith decomposition and CI/CD transformation

- Designed and led the full decomposition of a legacy .NET monolith into a domain-driven microservices architecture — enabling independent deployments, team autonomy, and faster iteration cycles across financial product areas.
- Transformed release cadence from 3-week sprints to daily deployments through blue-green strategies, feature flags, and overhauled Azure DevOps pipelines — cutting build and deployment time by 40%.
- Collaborated directly with product managers to understand business and regulatory drivers, translating them into prioritised technical roadmaps that balanced new value delivery with compliance obligations.
- Coached a distributed team of 6–8 engineers on clean architecture, domain-driven design, and backend engineering best practices, fostering a culture of shared ownership.

Full Stack Software Engineer | Equalios

Feb 2021 – Oct 2021

Greenfield regulatory monitoring application — sole engineer, design to production

- Built a full-stack regulatory compliance monitoring platform from scratch (Node.js, Python/Flask, React/Angular, MongoDB, GCP) — automating data collection and reducing manual compliance research effort by ~60% for legal teams.
- Took complete ownership of the product: architecture, database design, REST API contracts, frontend delivery, and production deployment — building a user-centric solution from zero to production independently.

Certification

AZ-204: Developing Solutions for Microsoft Azure (AZ-294) – Microsoft, Exp. May 2026

EDUCATION

Engineering Degree in Computer Science | Tunis El-Manar University, Tunisia

Sep 2017 – Oct 2021

LANGUAGES

Arabic (Native) | English (Full Professional Proficiency) | French (Full Professional Proficiency) | Spanish (Conversational)
